

**Firmware version: RT90-REC-D04.03.bin**

**Programming software: V1.18**

**Correct the following bug:**

- In Voice receiving process, frequency display will jump back.
- When voice receiving, frequency displayed incorrectly.
- When scan in VFO mode, Transmit frequency display incorrectly.

**Turn on upgrade mode:** Press P1+ Alarm key (red key) to connect the power of RT90, (NOT JUST TURN ON THE RADIO!!!!!!)Display blinks and open upgraded software

And then write upgraded file named Upgraded software for scanning function into radio, the radio will be upgraded as following:
